

## MediNotes e Rx

### Electronic Prescribing

Every year 7,000 patients die from prescription errors. Physician offices receive over 150 million call-backs from pharmacists regarding patient medication. Clearly the medical industry is in a state of crisis. There has to be a better way.

#### Simply the right choice

MediNotes e Rx is based on the award winning Rcopia system from DrFirst. Rcopia has won many awards including the 2004/2005 Top Honors at TEPR, 2005 3G A-List Qualcomm Award, 2005 Frost & Sullivan "Technology of the Year" award, and is endorsed and supported by the Massachusetts and Delaware Medical Societies. The Rcopia functionality has been completely integrated into MediNotes e™, leaving an uncluttered interface that is completely consistent with the rest of the program.

#### Reasons to consider MediNotes e Rx:

- **Formularies** - The ability to check medications against your patient's formularies improves care plan compliance and ensures that your patient is receiving the best value.
- **Drug/Drug and Drug/Allergy interaction checking** - Real-time checking at the point-of-care ensures that patients are prescribed the proper medications giving their known medical history.
- **Virtually eliminate pharmacy callbacks** - Medications prescribed through MediNotes Rx are immediately available to pharmacists and completely legible.
- **Full connectivity with SureScripts and RxHub** - Ensuring accurate and timely information exchanges between your patients and their choice of pharmacies.

#### Powerful Results

- **Patient Safety** - The key to patient safety hinges on real-time accessibility of information. MediNotes e Rx ensures that you are connected to the most up to date drug interaction information available.
- **Better Patient Care** - MediNotes e Rx will inform the prescriber if the medication is not available in the patient's formulary. This real-time access the available drug lists keeps the cost to the patient down which directly influences whether they follow with the suggested care plan or not.
- **Increased Efficiency** - Once your prescription has been submitted, the process is complete. No need to file the prescription information. It is already electronically stored in the database.
